

## **Amendments to the Claims**

The following listing of claims will replace all prior versions, and listings, of claims in the application.

### **Listing of Claims**

- 1           1. (Previously presented) A method of interfacing to a system comprising:
  - 2           receiving speech input data from a user;
  - 3           identifying a language spoken by the user from the speech input data;
  - 4           converting the speech input data into a first text in the identified language by
  - 5           recognizing the user's speech in the speech input data based at least in part on the
  - 6           language identifier;
  - 7           parsing the first text to extract keywords;
  - 8           automatically translating the keywords into a plurality of automatically selected
  - 9           languages other than the identified language;
  - 10          using the translated keywords as a command to an application;
  - 11          receiving results to the command;
  - 12          automatically summarizing the results;
  - 13          converting the summarized results into a second text with a prosodic pattern
  - 14          according to the language spoken by the user; and
  - 15          rendering the second text for perception by the user.
- 1           2. (Cancelled)

1           3. (Previously presented) The method of claim 1, wherein rendering comprises  
2   converting the second text into speech and rendering the speech to the user.

1           4. (Cancelled)

1           5. (Previously presented) The method of claim 1, further comprising using the  
2   keywords as a search query to at least one search engine, wherein the results comprise  
3   search results from the at least one search engine operating on the search query.

1           6. (Cancelled)

1           7. (Previously presented) The method of claim 1, further comprising  
2   automatically translating the keywords into a plurality of automatically selected  
3   languages other than the identified language and using the translated keywords as a  
4   search query to at least one search engine in multiple languages, wherein the results  
5   comprise search results in multiple languages from the at least one search engine  
6   operating on the search query.

1           8. (Previously presented) The method of claim 7, further comprising  
2   automatically translating search results in languages other than the language spoken by  
3   the user into the language spoken by the user.

1           9. (Original) The method of claim 1, wherein the application comprises a web  
2 browser.

1           10. (Previously presented) The method of claim 9, wherein the web browser  
2 interfaces with at least one search engine and the command comprises a search query.

1           11. (Original) The method of claim 9, wherein the web browser interfaces with a  
2 shopping web site and the command comprises at least one of a purchase order and a  
3 request for product information.

1           12. (Original) The method of claim 1, wherein the speech comprises  
2 conversational speech.

1           13. (Previously presented) An article comprising: a storage medium having a  
2 plurality of machine readable instructions, wherein when the instructions are executed  
3 by a processor, the instructions provide for interfacing to a system by receiving speech  
4 input data from a user, identifying a language spoken by the user from the speech input  
5 data, converting the speech input data into a first text in the identified language by  
6 recognizing the user's speech in the speech input data based at least in part on the  
7 language identifier, parsing the first text to extract keywords, automatically translating  
8 the keywords into a plurality of automatically selected languages other than the  
9 identified language, using the translated keywords as a command to an application,  
10 receiving results to the command, automatically summarizing the results, converting the

11 summarized results into a second text a prosodic pattern according to the language  
12 spoken by the user, and rendering the second text for perception by the user.

1 14. (Cancelled)

1 15. (Previously presented) The article of claim 13, wherein instructions for  
2 rendering comprise instructions for converting the second text into speech and  
3 rendering the speech to the user.

1 16. (Cancelled)

1 17. (Previously presented) The article of claim 13, further comprising instructions  
2 for using the keywords as a search query to at least one search engine, wherein the  
3 results comprise search results from the at least one search engine operating on the  
4 search query.

1 18. (Cancelled)

1 19. (Previously presented) The article of claim 13, further comprising instructions  
2 for automatically translating the keywords into a plurality of automatically selected  
3 languages other than the identified language and using the translated keywords as a  
4 search query to at least one search engine in multiple languages, wherein the results

5   comprise search results in multiple languages from the at least one search engine  
6   operating on the search query.

1           20. (Previously presented) The article of claim 19, further comprising instructions  
2   for automatically translating search results in languages other than the language spoken  
3   by the user into the language spoken by the user.

1           21. (Original) The article of claim 13, wherein the application comprises a web  
2   browser.

1           22. (Previously presented) The article of claim 21, wherein the web browser  
2   interfaces with at least one search engine and the command comprises a search query.

1           23. (Original) The article of claim 21, wherein the web browser interfaces with a  
2   shopping web site and the command comprises at least one of a purchase order and a  
3   request for product information.

1           24. (Original) The article of claim 13, wherein the speech comprises  
2   conversational speech.

1           25. (Previously presented) A language independent speech based user interface  
2   system comprising:

3 a language identifier to receive speech input data from a user and to identify the  
4 language spoken by the user;  
5 at least one speech recognizer to receive the speech input data and the  
6 language identifier and to convert the speech input data into a first text based at least in  
7 part on the language identifier;  
8 at least one natural language processing module to parse the first text to extract  
9 keywords;  
10 at least one summarization module to automatically summarize the search  
11 results from at least one search engine operating on the search query using the  
12 extracted keywords;  
13 at least one language translator to automatically translate the keywords into a  
14 plurality of automatically selected languages other than the identified language for use  
15 as a command to an application, and to translated results to the command in languages  
16 other than a language spoken by the user to the language spoken by the user; and  
17 at least one natural language generator to convert the summarized results into a  
18 second text with a prosodic pattern according to the language spoken by the user.

1 26. (Previously presented) The system of claim 25, further comprising at least  
2 one text to speech module to render the second text audibly to the user.

1 27. (Previously presented) The system of claim 25, further comprising at least  
2 one language translator to automatically translate the keywords into a plurality of  
3 automatically selected languages for use as a search query, and to automatically

4 translate the search results in languages other than the language spoken by the user  
5 into the language spoken by the user prior to summarizing the translated results and  
6 converting the summarized results into the second text in a natural language format.

1 28. (Cancelled)

1 29. (Original) The system of claim 25, wherein the system is coupled to a web  
2 browser.

1 30. (Previously presented) The system of claim 29, wherein the web browser  
2 interfaces with at least one search engine, the keyword comprises a search query, and  
3 the second text comprises search results from the at least one search engine.

1 31. (Cancelled)

1 32. (Previously presented) The system of claim 29, wherein the web browser  
2 interfaces with a shopping web site and the command comprises at least one of a  
3 purchase order and a request for product information.

1 33. (Previously presented) A language independent speech based search  
2 system comprising:  
3 a language identifier to receive speech input data from a user and to identify the  
4 language spoken by the user;

5 at least one speech recognizer to receive the speech input data and the  
6 language identifier and to convert the speech input data into a first text based at least in  
7 part on the language identifier;

8 at least one natural language processing module to parse the first text to extract  
9 keywords;

10 at least one search engine to use the keywords as a search term and to return  
11 search results;

12 at least one language translator to automatically translate the keyword into a  
13 plurality of automatically selected languages prior to input to the at least one search  
14 engine to search across multiple languages, and to automatically translate search  
15 results in languages other than the language spoken by the user into the language  
16 spoken by the user;

17 at least one automatic summarization module to automatically summarize the  
18 translated search results;

19 at least one natural language generator to convert the summarized results into a  
20 second text with a prosodic pattern according to the language spoken by the user.

1 34. (Cancelled)

1 35. (Original) The system of claim 33, further comprising at least one text to  
2 speech module to render the second text audibly to the user.

1 36-38. (Cancelled)

1           39. (Previously presented) The method of claim 1, wherein the prosodic pattern  
2 is capable of making the second text sound natural and grammatically correct.

1           40. (Previously presented) The article of claim 13, wherein the prosodic pattern  
2 makes the second text sound natural and grammatically correct.

1           41. (Previously presented) The system of claim 25, wherein the prosodic pattern  
2 makes the second text sound natural and grammatically correct.

1           42. (Previously presented) The system of claim 33, wherein the prosodic pattern  
2 makes the second text sound natural and grammatically correct.
